

Lessons from Black Summer

Fire Australia 2024, 9 May 2024, Surfers Paradise
Dr Rowena Morris, NSW/ACT Node Research Manager, Natural Hazards Research Australia

Lessons from Black Summer

28 organisations

23 projects, Multi-discipline

- fire predictive services
- cultural land management
- community-centred disaster risk reduction
- bushfire data and reconstruction.

- Why was this fire season so devastating?
- What new capabilities can be implemented?
- How can Australia learn from its worst season?

Understanding Black Summer

When

- August 2019 to March 2020

Consequences

- 33 lives lost
- 1000's affected by smoke inhalation and other impacts

Government response

- Several states and territories held post-fire inquiries and reviews, and the Australian Government conducted the Royal Commission into National Natural Disaster Arrangements.

Research Program

Bushfire and Natural Hazards CRC

23 projects, 28 organisations

Multi-discipline

- fire predictive services
- cultural land management
- community-centred disaster risk reduction
- bushfire data and reconstruction.

Fire predictive services

To boost situational awareness before and during bushfires, and to enhance the sharing of risk information and warnings with communities.

Modelling fire weather interactions

Researchers

Dr Mika Peace at the Bureau of Meteorology
With emergency services in Queensland, New
South Wales, Victoria, South Australia and
Western Australia. **ACCESS-Fire model**

Fire generated vortex near Karumba (Victoria, Corryong fire) at 7.30pm 30 December 2019.

Established and emerging uses of predictive services in Victoria

Researchers

Dr Chloe Begg (Country Fire Authority), Dr Graham Dwyer (Swinburne University of Technology), and Dr Timothy Neale and Dr Ian Pollock (Deakin University).

FBANs and users interact in the Victorian State Control Centre, January 2020. Photo credit: Timothy Neale

Identifying water sources using satellite imagery

Researchers

Leo Lymburner at Geoscience Australia, with support from the National Aerial Firefighting Centre. **Digital Earth Australia (DEA) data Sentinel-2**

FIGURE 11 LOCATION NOW WITH THE INCLUSION OF TREE COVER (SHOWN IN GREEN BUFFERS)

Trees close to the top dam render it unsuitable for access.

Mapping surface fine fuel moisture content

Researchers

Li Zhao, with A/Prof Marta Yebrá and Prof Geoff Cary at the Australian National University. **Australian Flammability Monitoring System**

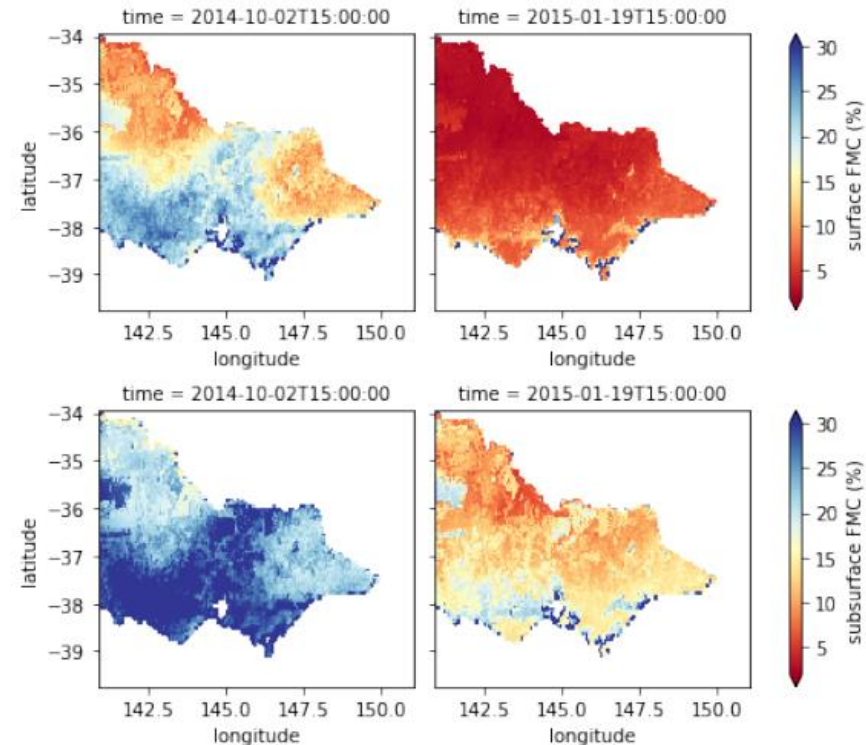

Figure 9 Estimates of surface (left) and subsurface (right) FMC from the coupled model in Victoria on the 2nd of October 2014 (top) and the 19th of January 2015 (bottom).

Cultural land management

To learn from Traditional Owners on how to reduce landscape risk through better integrated cultural land management knowledge and practices

Dharawal National Park

Jingga Track
Grade hard
300m to track head
(Track - 2.4 km return)

O'Hares Creek Lookout
Grade easy
2.4 km return

Minerva Pool Lookout
Grade medium
2.4 km return to lookout

10B Management Trail
Grade medium
2.4 km return to weir
(Skip sections down to the weir)

Dharawal National Park

Minerva Pool

Minerva Pool is culturally significant to the Dharawal traditional owners.

Minerva Pool is a place for only women and children to enter the waters.

We invite you to visit the lookout, explore the natural scenery and respect the cultural significance.

Artwork by Cora Matheson, Dharawal Aboriginal Corporation

Cultural land management in southeast Australia

Researchers

Oliver Costello (Jagun Alliance Aboriginal Corporation), Tasmin Dilworth and Dr Katharine Haynes (University of Wollongong), Tony Jansen (One Point Five Degrees) and Dr Timothy Neale (Deakin University).

Minyumai Indigenous protected area, North Coast Cultural Land Management Workshop, 17-18 May 2021.

Cultural land management resources

Principles and protocols for cultural land management governance and research

Natural hazards management agencies and research institutions all have legal and ethical obligations to engage with Indigenous peoples no matter where they work in Australia. **Everywhere is Country and Indigenous peoples speak for Country.** Nonetheless, starting or maintaining intercultural collaborations can present many obstacles, and there is a need for guidance on how to best work together for the benefit of Country. The following summarises a review of relevant collaborative principles, processes and protocols for agencies and research institutions. It is only a **starting point** for local and in-depth conversations.

PRINCIPLE	EXAMPLE PROCESS	EXAMPLE PROTOCOL
1. SELF-DETERMINATION OR COUNTRY Cultural land management must be self-determined and rights based	Develop collaborative structures that respect Indigenous self-determination	Establish free, prior and informed consent mechanisms for collaboration
2. RECONCILIATION, SOCIAL JUSTICE Indigenous peoples have the right to speak authoritatively about Country	Resource and support representative bodies to act as partners	Require to design and delivery with representative bodies
3. HEALTHY COUNTRY, HEALTHY PEOPLE Indigenous leadership and resurgence through caring for Country 'our way'	Resource and support capacity-building according to self-determined pathways	Establish agreements that provide long-term and secure access to Country
4. EMPowerment OF INDIGENOUS KNOWLEDGE-HOLDERS Resourcing and support Indigenous women's access to raised and significant tasks	Develop awareness of historical and contemporary issues facing Indigenous peoples	Establish guidelines for developing and protecting sacred and significant women's sites
5. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop training and policies to foster connection to Country and culture	Make place based cultural sustainability training compulsory for all staff
6. RECOGNITION OF INDIGENOUS KNOWLEDGE-HOLDERS Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish cultural safety frameworks and embed in all induction processes
7. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish formal governance arrangements to support as Country practice
8. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish the cultural mentoring role to support as Country practice
9. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
10. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
11. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
12. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
13. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
14. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
15. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
16. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
17. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
18. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
19. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values
20. BENEFITS WITH AND FOR INDIGENOUS COMMUNITIES Resourcing and support Indigenous people's cultural safety and acceptance	Develop policies that consider, respect, and monitor cultural and natural values	Establish responses for fires and other hazards and non-urgent Indigenous values

Indigenous fire and land management in northern Australia

Researchers

Glenn James and Danny Burton (North Australian Indigenous Land and Sea Management Alliance; NAILSMA) and supported by Otto Campion (Aboriginal Research Practitioners' Network; ARPNet), Barry Hunter (Djabugay Aboriginal Corporation), and Jimmy Morrison, Ted Gondarra and James Bayung (Dalkarra and Djirrikay Authority)

Final project workshop, Kuranda. Qld. Hosted by Djabugay. 10 May 2021.

Community-centred disaster risk reduction

To understand and assist communities and governments in enabling effective and efficient community participation and leadership in disaster preparation, relief and recovery

Community attitudes and experiences of the 2019-20 NSW bushfire season

Researchers

Commissioned by the NSW Rural Fire Service and completed by Dr Josh Whittaker, Dr Katharine Haynes, Carrie Wilkinson and Stephanie Samson at the University of Wollongong, and Dr Matalena Tofa, Dr Tamsin Dilworth, Jessica Collins and Lillian Tait at Macquarie University.

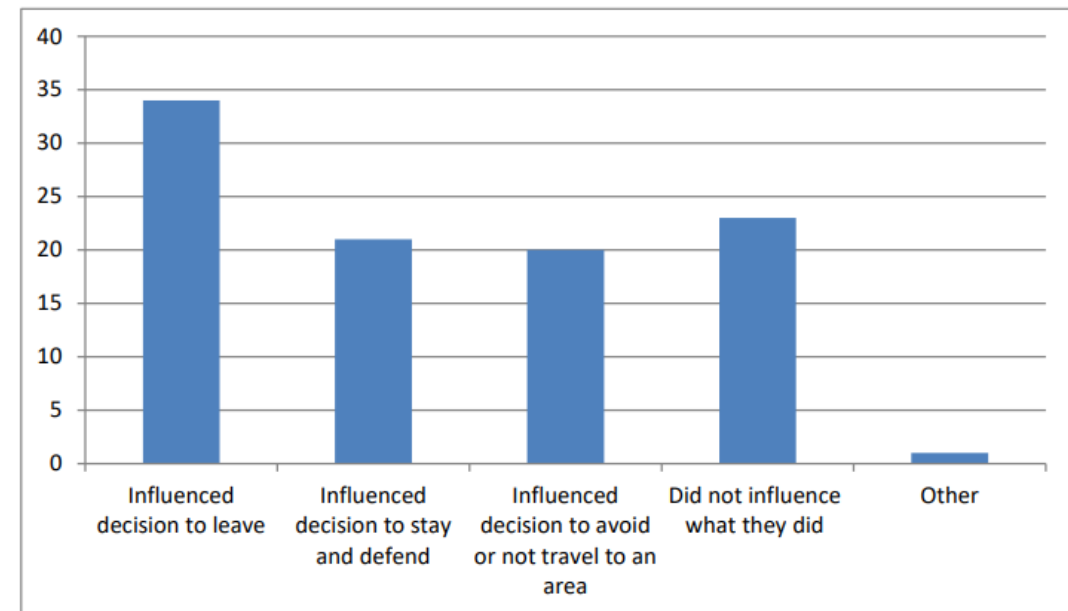

FIGURE 12: INFLUENCE OF FIRE SPREAD PREDICTION MAPS ON DECISIONS (%)

Community-led recovery

Researchers

This project was completed by Prof Lisa Gibbs, Dr Colin Gallagher, Dr Kate Brady, Dr Claire Leppold and Greg Ireton from the University of Melbourne, Andrew Haywood, Yvette Clarke and Stewart Davies at Bushfire Recovery Victoria, and Fyowna Norton and Vaughn Brandenburg at Emergency Management Victoria

Understanding experiences and recovery capabilities of diverse communities in Gippsland

Researchers

Commissioned by Victoria University's Institute for Sustainable Industries and Liveable Cities and delivered in partnership with Gippsland community members and the Victorian Council of Social Service

East Gippsland and Wellington Shires

SA Fire risk modelling for Kangaroo Island

Researchers

Erica Marshall, Denis Kultaev, Sarah McColl-Gausden, Dr Alexander Filkov and A/Prof Trent Penman from the University of Melbourne

Fire Regime and Operations Simulation Tool .

Prescribed burning (scenario one)

Prescribed burning (scenario two)

FIGURE 5: LOCATIONS ON KANGAROO ISLAND WHERE WILDFIRE FREQUENCY DIFFERED BETWEEN THE WILDFIRE ONLY AND THE PRESCRIBED BURNING BURNING SCENARIOS. POSITIVE VALUES SHOW WHERE THE FREQUENCY OF WILDFIRES WAS HIGHER IN THE PRESCRIBED BURNING SCENARIO COMPARED TO THE WILDFIRE ONLY SCENARIO. NEGATIVE VALUES SHOW WHERE THE WILDFIRE ONLY SCENARIO HAD A HIGHER FREQUENCY THAN THE PRESCRIBED BURNING SCENARIO AND ZERO INDICATES NO CHANGE IN THE FREQUENCY OF WILDFIRES.

WA Yanchep bushfire analysis

Researchers

Dr Joe Fontaine at Murdoch University

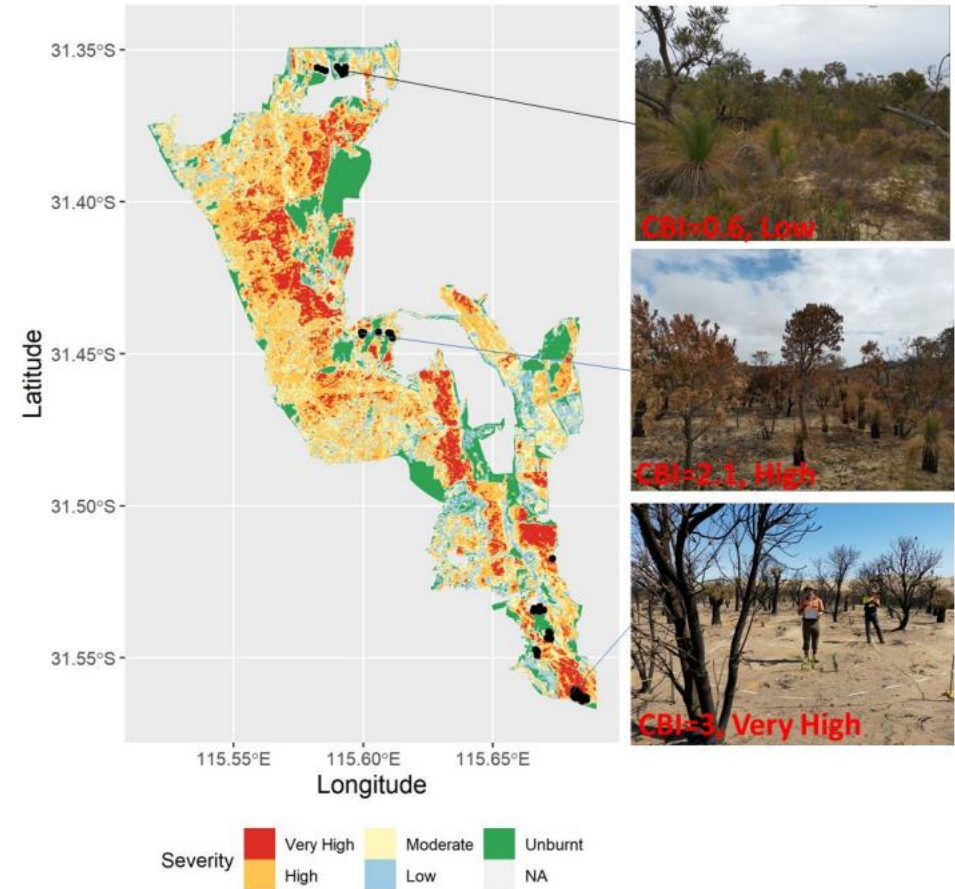

FIG 3. FIRE SEVERITY CLASSES WITHIN THE YANCHEP BUSHFIRE USING RBR THRESHOLDS AND BLACK POINTS REFLECTING CBI PLOTS WITHIN THE BUSHFIRE PERIMETER. PHOTOS AT RIGHT DEPICT A RANGE OF SEVERITY CONDITIONS, MEASURED JANUARY 2020.

WA

Validating fuel moisture estimates in Yanchep

Researchers

A/Prof Marta Yebra and Shukhrat Shokirov at the Australian National University. **Sentinel 2**

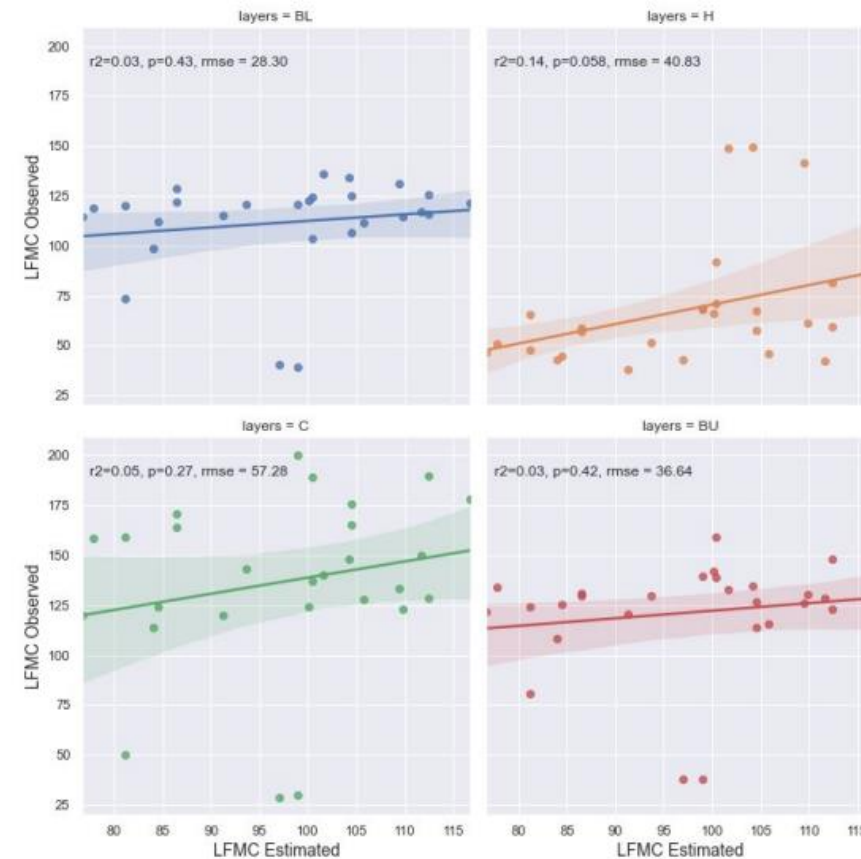

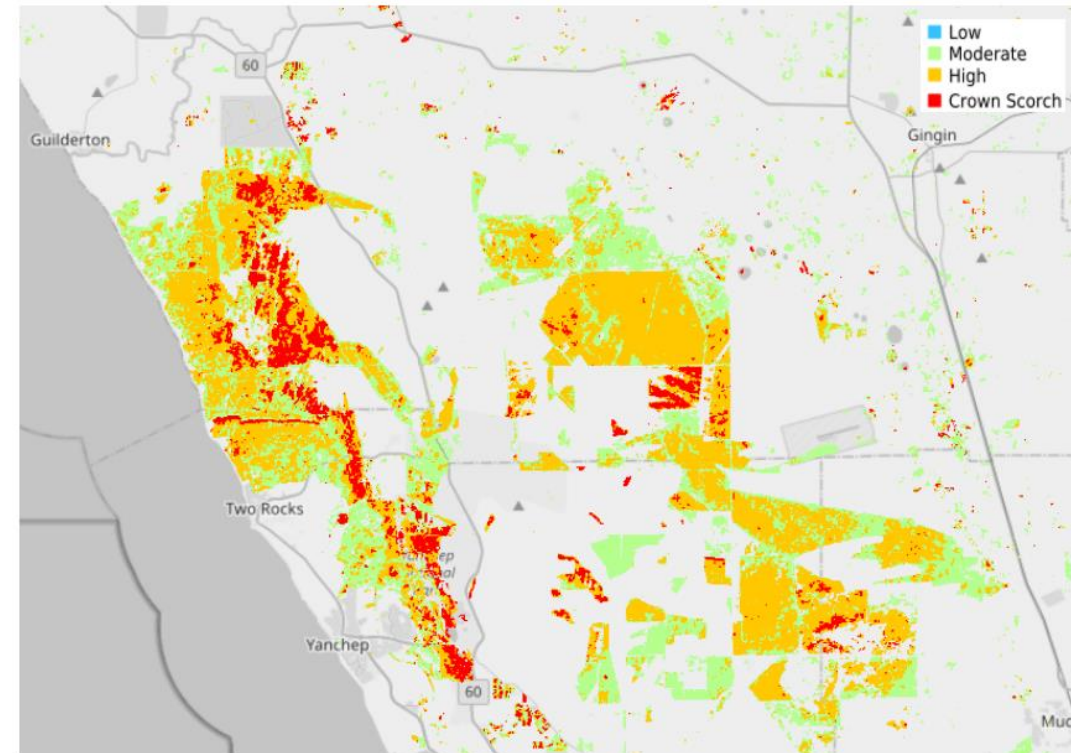

Figure 8. Relationship between observed and estimated LFM by different vegetation layers (BL - Banksias Lower, BU - Banksias Upper, H - Hibbertias, C - Calothamnus).

WA

Fuel moisture and fire history of south-west WA from Sentinel-2 satellite imagery

Researchers

Adrian Allen, Norman Santich and Passang Dorji at Landgate (Western Australia's land information authority), and Agnes Kristina and Jackson Parker at the Department of Fire and Emergency Services (DFES), as part of a larger project with DFES, the Department of Biodiversity, Conservation and Attractions (DBCA), Australian National University (ANU) and Murdoch University.

FIRE SEVERITY HISTORY DEVELOPED FROM 2016 TO 30 JUNE 2021 FROM SENTINEL 2 IMAGERY

Priorities moving forward

The findings of this research were used to inform the national Research Priorities, published by Natural Hazards Research Australia to guide research into disaster risk reduction and natural hazard resilience.

- Translation of observed and modelled extreme bushfire behaviours to improve fire prediction and fireground safety
- Understanding the design, communication and dissemination of predictive maps to the public
- Cultural land management (northern): connecting Indigenous people and the emergency management sector – effective partnerships
- Cultural land management (southern): cultural land stewardship research in south east Australia
- Community-led recovery: evidence, dimensions, and supports for Community Recovery Committees
- Identifying water sources for aerial firefighting

Research and Implementation

Progress

- 52 active research projects
- 61 postgraduate scholar and associate students
- Data management framework and catalogue to share hazards data being established
- Research informed findings presented at conferences, workshops, seminars and more

More in 2024

- More rounds of research investment
- Commencement of work placement progress
- Thought leadership
- First Nations Scholarship
- Measuring performance

Conclusion

Program

Lesson-management perspective

Moving forward

Research program has been extended by Natural Hazards Research Australia

- dynamic situational awareness
- natural hazard focused risk management and risk reduction
- incident management and decision-making in a dynamic and uncertain environment
- responsive recovery
- understanding the needs and values of communities through a natural hazard lens
- collecting and managing natural hazards research data

Thank-you
